NIKOLATESLA

AN UNCONVENTIONAL UNION  
FOR ANYONE WHO LOVES  
THINKING OUTSIDE THE BOX.

The first aspirating hob by Elica, can reach very high performance levels in terms of fume capture, noise level and energy efficiency. Thanks to a direct communication with the hob, Nikola Tesla receives the information coming from the cooking zones and automatically sets ideal aspiration values. Available both in aspiration and filtering mode, the hob has been designed to fit in any type of living space.

EMPTY SKY

SUSPENDED ELEMENTS,  
PURITY OF SHAPES.

Empty Sky is the first Elica ceiling hood in Cristalplant, designed with a simple gesture: a curve that alters the planarity of the ceiling, creating a slice where air is aspirated from. The innovative hanging polished steel element represents the technological heart of the product. The practical guides in the body of the hood, allow for the opening of the two Cristalplant components, thus making cleaning and maintenance easier. Aspiration is both central and along the perimeter, contributing to maximum aspiration performance and low noise level. Matte white with a velvety effect, accentuates the purity of the shape and the materiality of the product, which stylishly blends in with the style of the kitchen.

SWEET  
COPPER

A CLASSIC ATTITUDE  
TO MODERNITY.

Sweet's ability to harmonize with the contemporary living space is confirmed. The technopolymer allows for feathery lines that make shapes softer. A thin polished stainless steel line characterizes the elegant perimeter aspiration system, which increases cooking fumes uptake speed.

INDUSTRIAL CHARM  
FROM BYGONE DAYS.

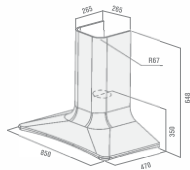

The hood descends, widens, and curves defining a wall as if it were a sculpture. It is not a post-modern art piece but a kitchen hood. The design aimed it to render it unique looking and to fascinate us with that industrial feeling from another time.
